Professional Edition Components

Intel® C++ Compiler Professional Edition 11.1 for Windows creates a solid foundation for building robust, high performance parallel code. It combines the compiler with the following:

Intel® Threading Building Blocks (Intel® TBB)

This award-winning C++ template library abstracts threads to tasks creating reliable, portable, and scalable parallel applications. Intel® TBB is the most efficient way to implement parallel applications and unleash multicore platform performance.

Intel® Integrated Performance Primitives (Intel® IPP)

This is an extensive library of multicore-ready, highly optimized software functions for multimedia data processing and communications applications.

Intel® Math Kernel Library (Intel® MKL)

This library includes optimized and scalable math routines for maximizing performance and seamlessly providing forward scaling from current multicore to future multicore and manycore platforms.

Attention Fortran Developers: Intel® Compiler Suite Professional Edition for Windows

The suite has all the features of the Intel C++ Compiler Professional Edition, and includes the Intel® Visual Fortran Compiler for Windows* for a more complete solution at significant price savings.

Advanced Optimization Features

- **High Performance Parallel Optimizer (HPO)** offers an improved ability to analyze, optimize, and parallelize more loop nests. This revolutionary capability combines vectorization, parallelization, and loop transformations into a single pass which is faster, more effective, and more reliable than prior discrete phases.
- **Automatic Vectorizer** analyzes loops and determines when it is safe and effective to execute several iterations of the loop in parallel.
- **Interprocedural Optimization (IPO)** dramatically improves performance of small- or medium-sized functions that are used frequently, especially programs that contain calls within loops. The analysis capabilities of this optimizer can also give feedback on vulnerabilities and coding errors that cannot be as effectively detected by compilers that rely on front-end analysis.

The interprocedural optimization process

- **Profile-Guided Optimization (PGO)** improves application performance by reducing instruction-cache thrashing, reorganizing code layout, shrinking code size, and reducing branch mispredictions.

The profile-guided optimization process

“Our customers were looking for lower cost solutions for delivery of video streams. The Intel® C++ Compiler and Intel IPP tools allowed ImageCom to meet the customer’s expectations for cost and timescales.”^S

Other Features

Windows Vista* and Visual Studio .Net 2005* and 2008* Support

Bring Intel* hardware expertise into the latest Microsoft* integrated development environment. Use Intel C++, Microsoft Visual C++ or both!

Multithreaded Application Support

OpenMP* and auto-parallelization help convert serial applications into parallel applications, allowing you to take full advantage of multicore technology.

Parallel Lint for OpenMP

Performs static analysis to check for OpenMP* parallelization correctness. Helps diagnose deadlocks, data races, or potential data dependency—side effects from synchronization issues.

Intel® Parallel Debugger Extension

Intel Parallel Debugger Extension integrates with the debugger in Visual Studio* to provide outstanding multithreaded application execution control without added complexity. Serialization of parallel region and detailed information on OpenMP constructs.

Enhance Intel Performance Library Access

You can now use dialog boxes in Visual Studio to tell the system to build with Intel® Threading Building Blocks and Intel® Performance Primitives. After adding library header files and library functions, this simplifies the building and linking process.

Compatibility

Intel® C++ Compiler 11.1 for Windows is substantially standards compliant, including support for parallelization by means of OpenMP. It also integrates with Microsoft Visual Studio 2005 and 2008, and provides expanded 32-bit and 64-bit multicore Intel processor support.

Intel C++ Compiler provides the following language conformances:

- ANSI/ISO standard for C language compilation (ISO/IEC 9899:1990)
- ANSI/ISO standard (ISO/IEC 14882:1998) for the C++ language
- OpenMP specification version 3.0
